blueplus PREMIUM DOSING

Complete and simple water treatment system based on RX & pH dosing

LINKABLE WITH bluematic

ADVANTAGES

- **Modern and stylish design**
  Durable housing with a sleek, professional look.
- **Detailed information**
  Real-time display of dosing values for accurate control.
- **Extra-large display**
  Clear overview of all parameters at a glance.

REF	DESCRIPTION
04092076	blueplus dosing premium

DOSAGE, EASY TO USE, MAXIMUM EFFICIENCY

The dosing and control systems are designed to optimise treatment products while reducing manual handling. They provide treatment by injecting chemical products :

- Chlorine for disinfection,
- Acid/base for pH regulation and
- Injection of algaecide or flocculent to supplement the main treatment

They operate according to a principle of doses and time slots that can be set according to the pool's needs. The dosing system is a fully automatic device where the regulation can vary depending on the model. Some models can be equipped with amperometric probes, renowned for their high precision and mainly intended for public pools, which allow the free chlorine contained in the pool to be measured in order to regulate it automatically.

WHY CHOOSE BLUEPLUS DOSING?

- Intuitive navigation on backlit LCD display
- Permanent display of ORP and pH values
- High quality pH Blue and ORP Gold sensors, factory tested and calibrated (2 year warranty, if used correctly). 1 year warranty on the ORP probe, 2 years on the pH probe
- Integrated silent dosing pumps
- Compatible with the new European regulation (N°2019/1148) : concentration of sulfuric acid adjustable
- Transparent measuring and probe chamber
- Automatic chlorine dosing by ORP probe
- Intelligent pH control in relation to the volume of the pool in acid or base mode
- Display of the water temperature
- Multilingual alarm message: cause of failure indicated by written message
- Adjustable ORP and pH set points
- Easy installation and assembly, possible via QR code
- Installation via app (E-pool)
