

Complete and simple water treatment system based on low-salt hydrolysis

Hydrolysis is an eco-friendly pool solution, ensuring clear water year-round. A titanium cell produces chlorine from lightly salted water to eliminate bacteria, algae, and chloramines without residue or pollution. The salt is automatically recycled, giving you a perfectly disinfected pool in comfort.

With saltwater chlorination, you choose:

PEACE OF MIND AND SIMPLICITY

- When you're not home, have no fear of having cloudy water
- Your pool is automatically disinfected, its maintenance is no more a chore
- Easy setting and user friendly device

HEALTH AND WELL-BEING

- Swim in pure and safe water when it's time to relax
- Enjoy therapeutic benefits of saltwater
- Forget sore eyes and dry skin

CONSTANT CHLORINE PRODUCTION

We chose current monitoring, a more demanding but far more effective technology than the common tension control. It ensures constant chlorine production, even with scaling, unstable pH, high bather load, or trees around the pool. No need to adjust chlorine levels throughout the season. Additionally, this technology supports self-cleaning cells.

ADVANTAGES

- **Modern and stylish design**
Durable housing with a sleek, professional look.
- **Detailed information**
Real-time display of dosing values for accurate control.
- **Extra-large display**
Clear overview of all parameters at a glance.
